

MANJULA R

DevOps Engineer

manjularajamani98@gmail.com | +91 9585779957

CAREER SUMMARY

As a motivated DevOps Engineer with over 2.5+ years of hands-on experience, I specialize in automating and optimizing deployment pipelines across diverse platforms. My expertise lies in problem-solving and adapting to dynamic environments, driving productivity through workflow enhancements. I am passionate about embracing emerging technologies to create scalable, secure systems, and I am committed to continuous learning and improvement.

PROFESSIONAL EXPERIENCE

itTRIDENT

DevOps Engineer | June 2022 - Present

Project-TechnoCIT

I was commissioned to rectify misconfigurations related to account management and platform security caused by amateur default settings in AWS

- Structured the VPC layout and organized the SDLC environments within
- Reduced the cost per NAT gateway by sharing a single NAT gateway using transit gateway attachments, providing ingress for several dozen Lambdas
- Enabled Security Hub for CSPM. prioritized and fixed findings based on severity, and aligned the security posture
- Provided secure access to DEV RDS via SSM tunneling, eliminating the need for legacy SSH port-forwarding
- Disabled Lambda Function URL to prohibit public access
- Enabled encryption for EBS volumes for security purposes
- Configured S3 general-purpose buckets to have server access logging
- Set S3 general-purpose buckets to require requests to use SSL via bucket policies
- Attached a policy to the secret key in Secrets Manager to restrict user access.
- Created a repository for projects and configured an AWS native pipeline to:
 1. Upload build artifacts to an S3 bucket
 2. Automatically build, tag, and deploy the application to an ECS cluster using Docker

Projects -OMEG

I was brought in to oversee the observability and security aspects of an ETL architecture hosted on the AWS Cloud.

- Developed a dashboard to analyze table operations and visualize metrics, aiding developers in optimizing the lambda function for the ETL job.
- Implemented delete protection on tables to prevent accidental deletions or deletions with malicious intent.
- Enabled DynamoDB table backups and backup encryption.
- Switched to using S3 Access Points (Object Lambda) instead of S3 bucket policies to secure the access channel for S3 objects from within the ETL lambda

itTRIDENT

Junior DevOps Engineer | Dec 2021 - May 2022

- As a Junior DevOps professional, I specialize in the seamless deployment of open-source projects.
- Fine-tuned Docker setups and Docker Compose configurations for smooth project launches.
- Demonstrated proficiency in agile deployment methods by deploying React and Node.js applications onto EC2 instances using Jenkins pipelines.
- Deployed a forum application on EC2 instances utilizing an Ansible playbook.
- Utilized Docker Swarm for container orchestration and clustering, enhancing management of Docker containers.
- Managed AWS cloud infrastructure, including maintenance of EC2 instances, S3 buckets, configuration of ECS and EKS, and optimization of VPC settings, Route53, DynamoDB, and Identity center (SSO).
- Proficient in managing ACM, SES, SNS, AWS Backup, CodeCommit and Elastic Container Registry.
- Automated application deployments through AWS cloud-native pipeline, significantly reducing deployment time.
- Developed AWS infrastructure using CloudFormation and Terraform for Infrastructure as Code (IaC).
- Managed IAM users, policies, and roles for access control.
- Utilized Cloud Build YAML for deploying applications across various GCP services such as Cloud Run, Cloud Storage, Compute Engine, and Cloud Registry.
- Employed AWS Code Commit, GCP's Source Repository, Azure Repo, and GitHub for source code management.
- Deployed applications into Kubernetes orchestration and utilized Helm package manager.

OPEN-SOURCE PROJECTS

- Deployed a SIT MERN (MongoDB, Express.js, React.js, Node.js) application on AWS ECS using GitHub Actions. Configured AWS Certificate Manager (ACM) to ensure secure browsing access
- Orchestrated the deployment of the VOLUNTEER MANAGEMENT APP on AWS ECS, ensuring its availability. Oversaw the successful Android and iOS versions launch on the Google Play Store and Apple App Store, expanding accessibility across platforms.
- Dockerized the Lufi and Hypertext-Editor application, deployed it, and submitted a pull request.
- Dockerized and efficiently deployed FluxBB forums on Hetzner using Terraform's Infrastructure as Code (IaC) and Ansible for efficient configuration management.
- Drafted the Helm chart for the Iris-web application and contributed to its deployment. The Helm chart for Iris-web has been merged into the repository.
- Drafted a Kubernetes YAML manifest for the Kanban-Board full-stack application and deployed the web application into Kubernetes.
- Developed Python scripts that have been seccomp'd via the libseccomp Python library.
- Drafted Helm charts for the TheHive application and submitted a pull request, contributing to the project's infrastructure.

CERTIFICATIONS

AWS Certified DevOps Engineer - Professional

SKILLS

- **Version Control:** GitHub, Bitbucket, Git
- **Cloud Platform's:** AWS, Azure
- **CI/CD:** Jenkins, GitHub Actions
- **Script:** Python, Groovy, Bash
- **Container/Orchestration:** Docker & Kubernetes
- **IAC:** Terraform, CloudFormation
- **Operating Systems:** Linux(Ubuntu, Centos)
- **Mobile Deployment:** Google Play Console
- **Monitoring Tools:** Prometheus & Grafana

EDUCATION

2016 - 2020 | AVS Engineering College

Bachelor's degree in electronic and communication engineering
